

## Energy & Utility Supply

### Always ensuring an adequate supply

We supply everything that is required for building lot preparation: electrical power, heating, cooling, water, the proper disposal of sewage as well as other disposal services incidental to waste management. Effective July 19, 2007, the state regulatory agency determined that Fraport AG's electrical power grid has the status of an "Objektnetz" (local network supplying energy to the confined area of an "economic entity") according to Article 110, subsection 1, no. 1, of the German Energy Industry Act (EnWG). As a supra-regional energy supply company, our Energy Air GmbH subsidiary ensures optimum energy supply for our customers at FRA and beyond.

### Our services

- Requirements, planning and construction of networks and systems
- Network operation
- Network calculation
- Network distribution to direct customer
