

Vehicle identification cards for the apron area (red): A new version will be available at the end of May 2020

Due to legal requirements, the red vehicle ID cards will be successively replaced by a new generation at the end of May. The new vehicle ID card, which will be significantly smaller in the future, must be firmly secured to the vehicle. Vehicles with a windshield will receive an ID card that resembles a vignette, and it must be attached to the inside of the window. Vehicles without a windscreen, such as Pallet transporters, will get a vehicle ID that is to be attached directly to the frame. Furthermore, the ID card's validity will be extended from 12 to 36 months to now five years.

Must all (red) vehicle ID cards be replaced starting May?

No, the rollout will be gradually implemented, and your current vehicle ID card is valid until it expires. The Airport ID Service Center (SCF) will issue you the new version when you apply for a new card. When you come pick up your new ID at the SCF, you will also receive instructions regarding how to properly attach your new card to your vehicle.

How can I enter controlled areas in the future?

For a passage through gate barrier systems in the operating or apron area of the Airport, you will receive a **green** vehicle ID card in addition to the vignette. This allows you to open the barrier systems.

What else will change?

Billing for the new vehicle ID cards will be calculated annually. Accordingly, the use of the vehicle ID card is calculated on an annual basis.
