

How to Charge Your Electric Vehicle

1 Start charging process

Before charging, please check the charging cable and charging station for damage and operational readiness.

Plug the charging cable into your vehicle; if using your own cable, connect it to the charging station and your vehicle.

Hold your charging card against the RFID reader on the charging station and note the display indication.

If you opt for direct payment, please follow the instructions on the charging station.

2 Charging process

The charging process starts automatically.

The charging cable is locked and cannot be removed during the charging process.

3 End charging process

To stop the charging process, hold the card against the reader again or, alternatively, activate your vehicle's unlock function. Then unplug the charging cable.
